Subject: Re: ASPECT report West Texas Fertilizer Fire, Updated Version 2
Date: Thursday, April 18, 2013 11:12:06 AM

Mark,

Will you point us to the FTP locations where we can pull down the flights paths and imagery from last night using the process you guys worked out with Grace Smith during the Hurricane Sandy Response.

Thanks,

I have included additional details on the ammonia detection, overall detection limits and the inclusion of concentration data in ppm (volumetric). We are getting ready to go back up and collect additional data and aerial photos. We should be airborne in about 30 to 45 minutes based on the improving weather.
